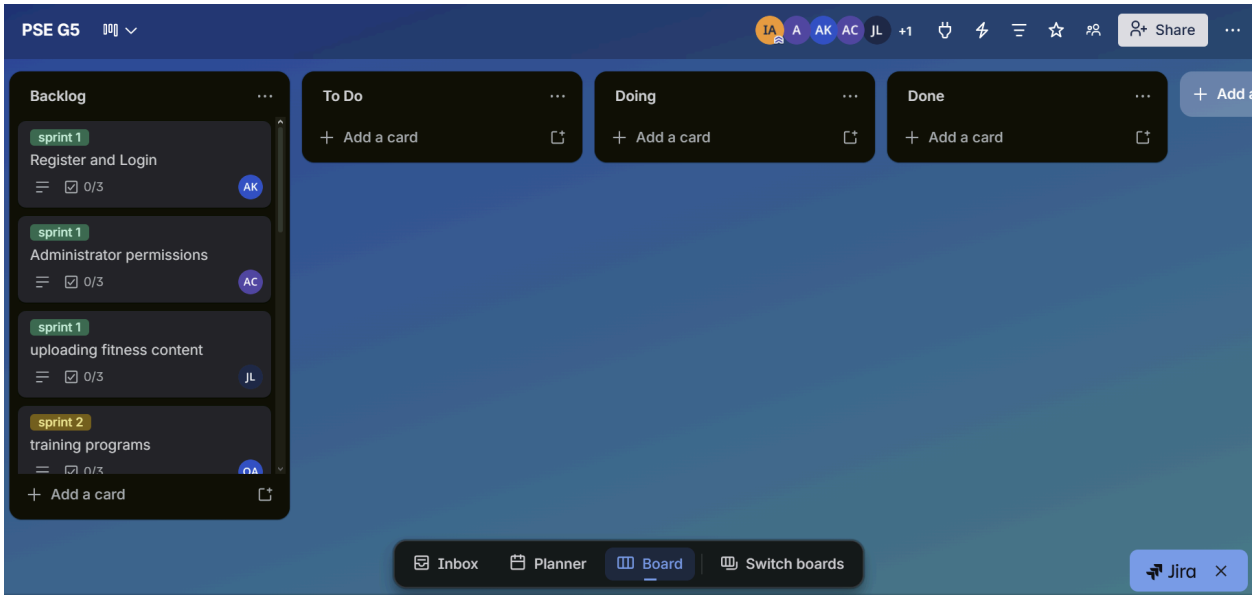
User Stories:

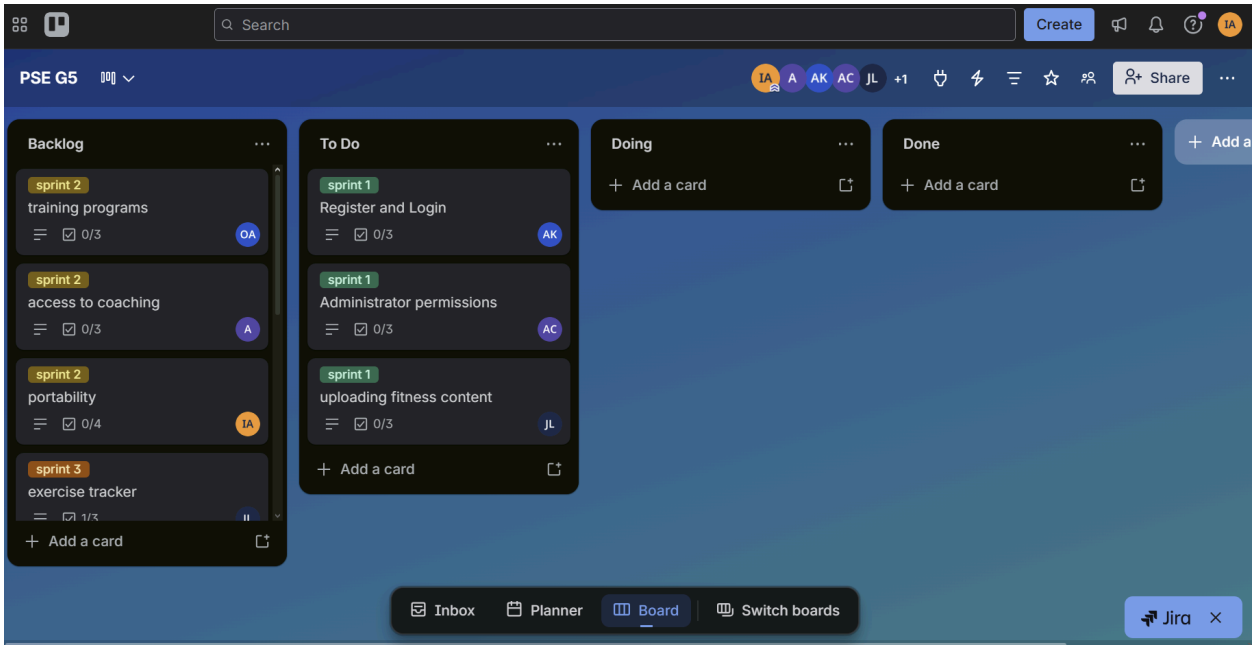
As a user I should be able to register and log into the app.
As an administrator I should be able to fully manage and oversee user and coach profiles. including the ability to create, suspend or delete profiles.
As a fitness coach I should be able to upload training programs and fitness advice for users to view.
As a user I should have access to personalized coaching advice from professional trainers.
As a user I should be able to sync with wearable like smart watches and smart scales.
As a user I should have access to a selection of training programs to choose from.
As a user the app should track the amount of steps I take and calories burned.
As a user I should be able to track the exercises i have done and have left to do.
As a user I should be able to easily track my macros using the apps nutrition tracker.
As a user I should be able to set a goal to reach and track. e.g getting a daily number of steps in or reaching desired weight.
As a fitness couch I should be able to reach out to specific users to give them personalized advice.
As a user I should be able to use the app for meditation and breathing exercises.

Sprint 1 (22/02/2026):

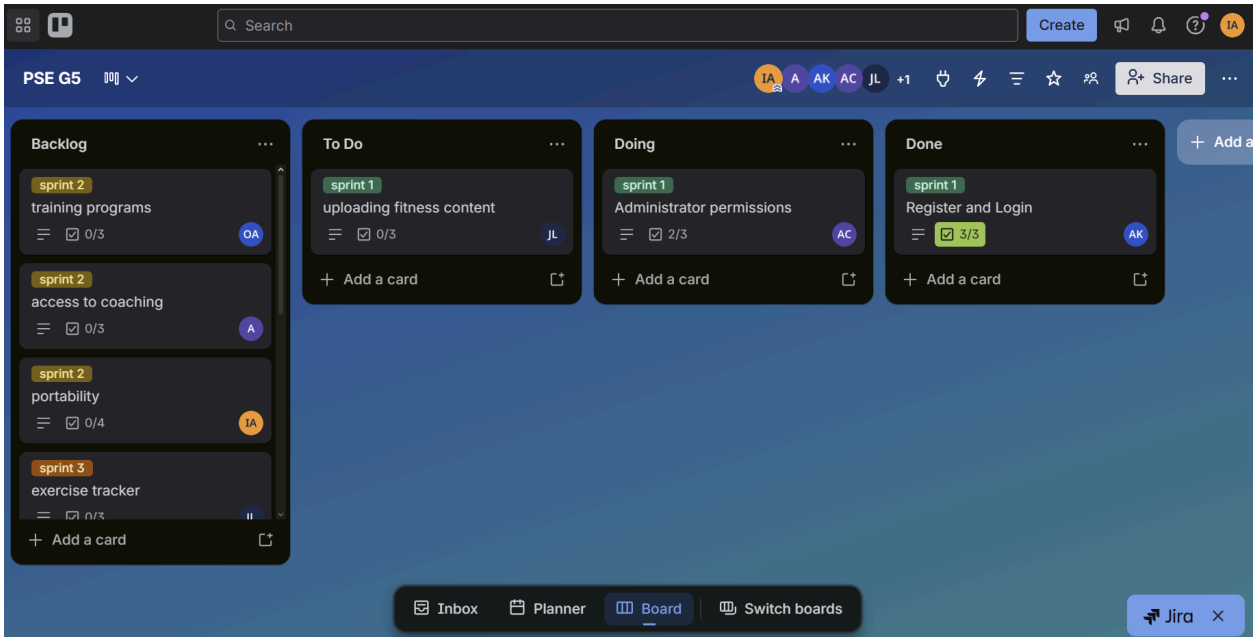


The Requirements for the fitness app were gathered and added to the Backlog along with user stories. Requirements were then ordered and put into separate sprints in order of importance with the most important features taking priority.

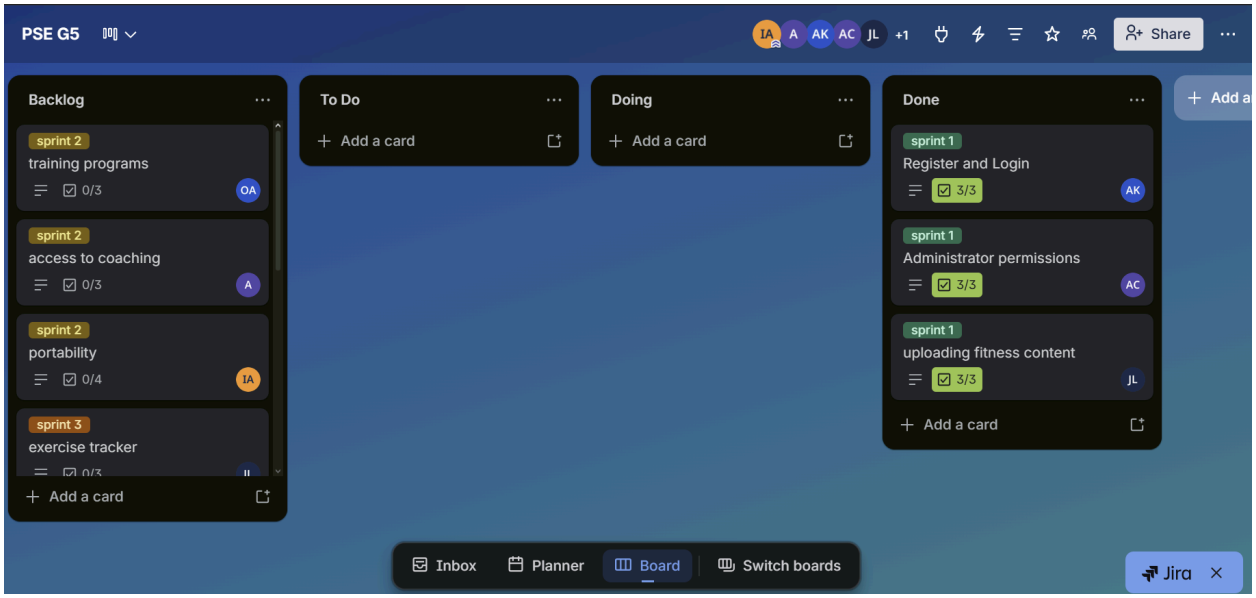
Sprint 1 Start:



Mid Sprint 1:



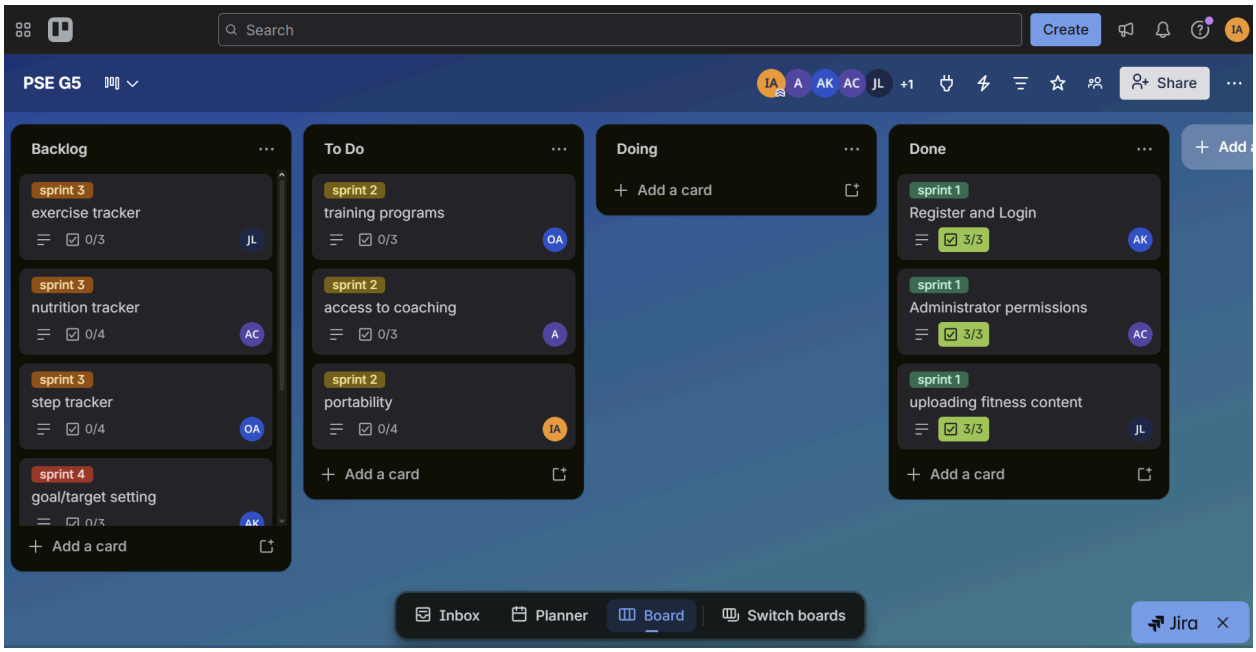
End of Sprint 1:



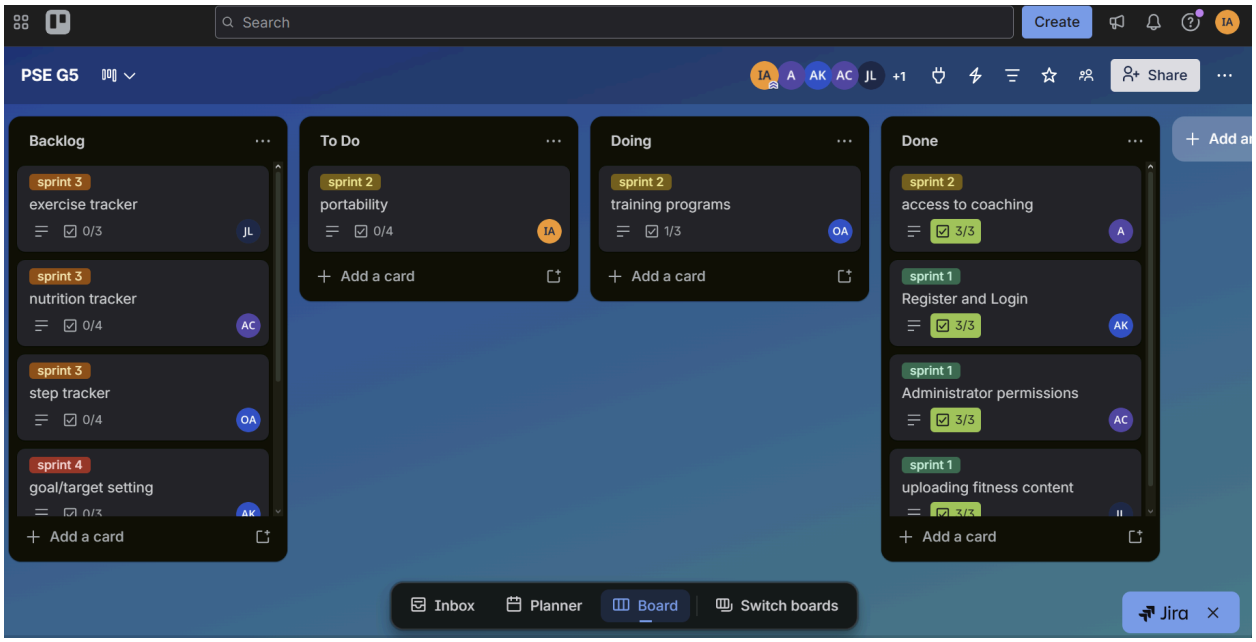
Sprint 1 went smoothly. All features were implemented with no problem, and all three user stories were completed on time.This created a solid foundation for the fitness app

Sprint 2 (26/02/2026):

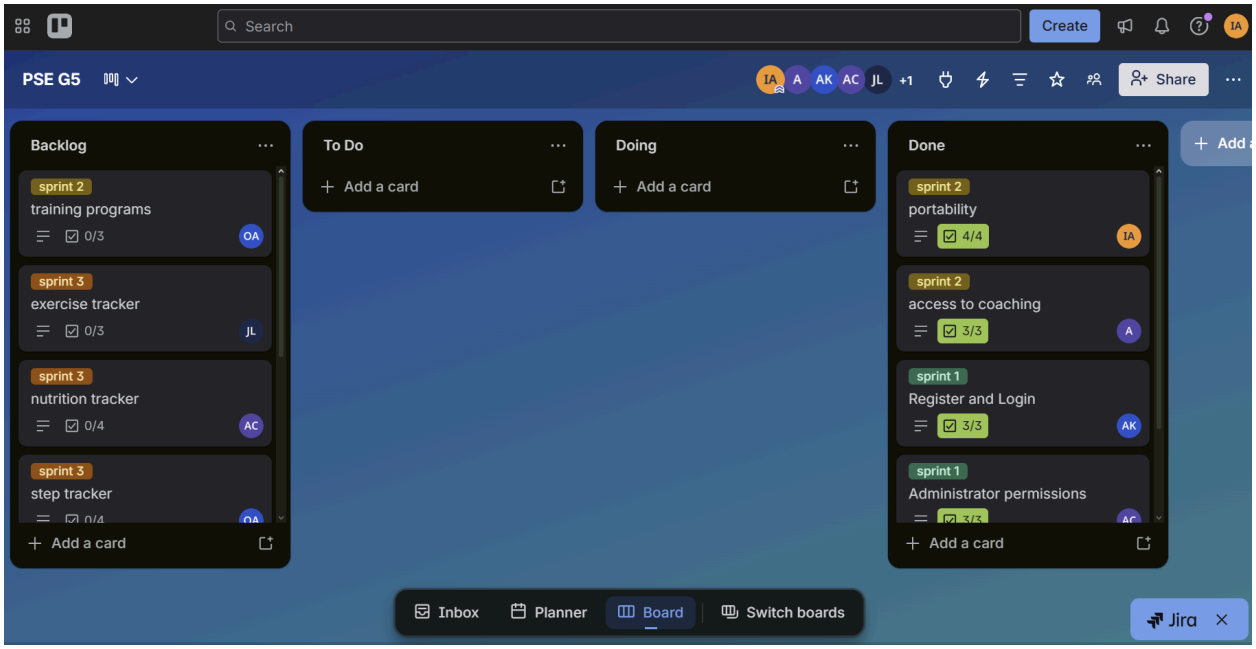
Start of Sprint 2:



Mid Sprint 2:



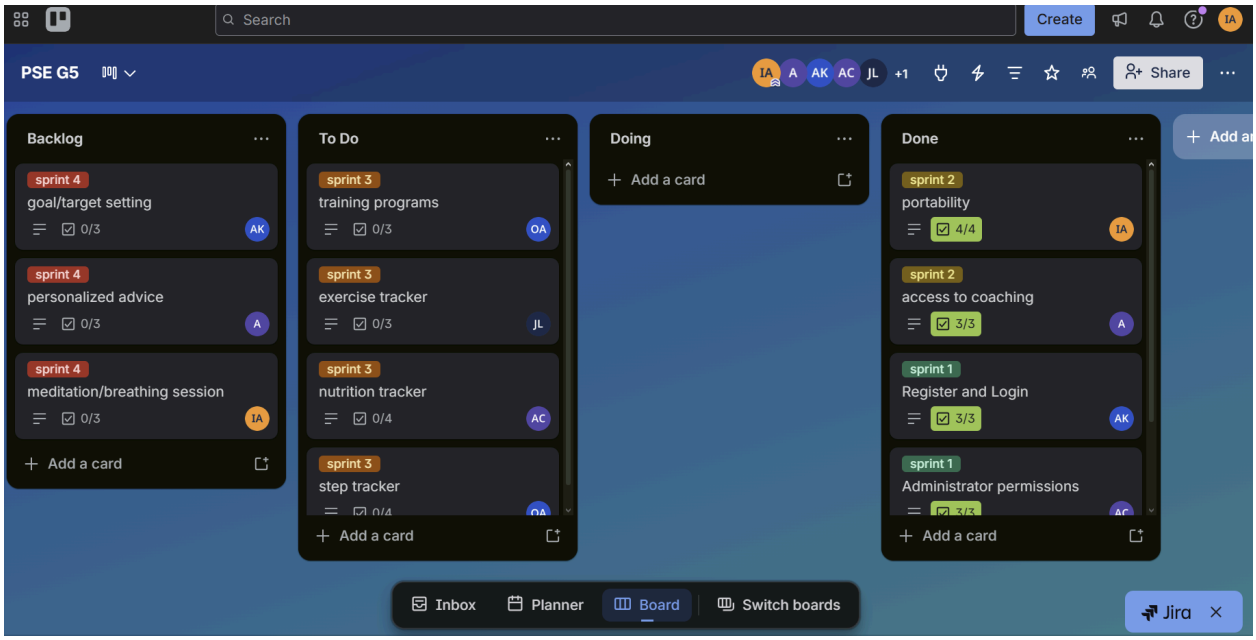
End of Sprint 2:



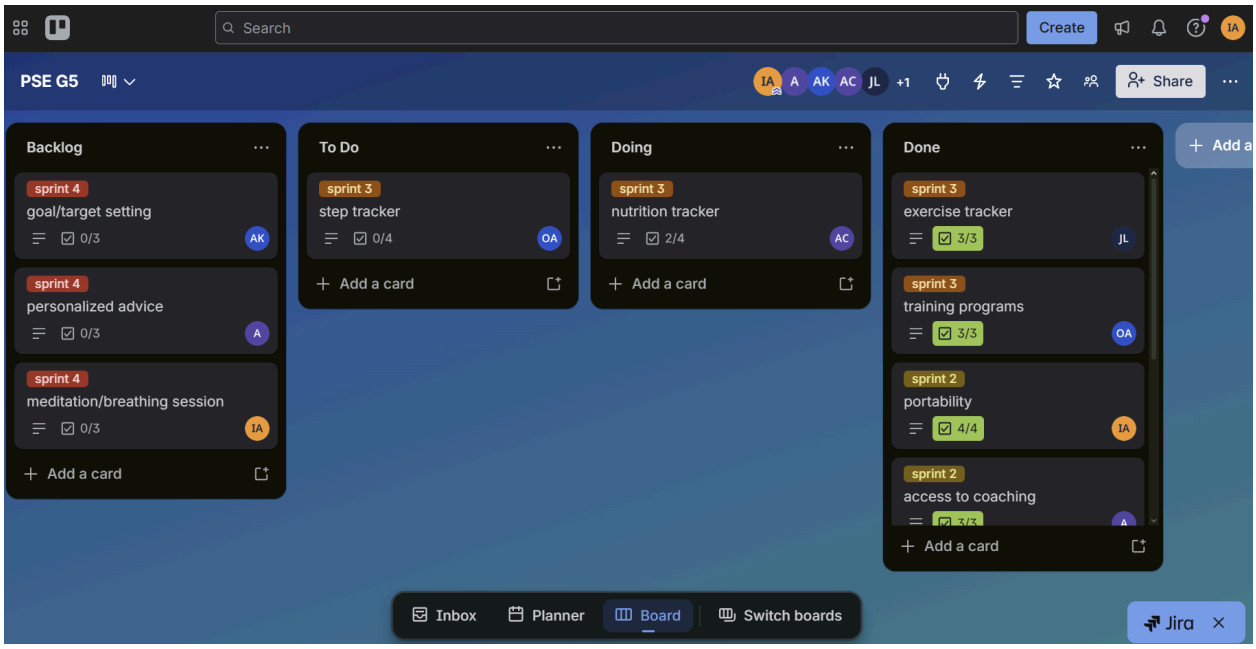
Sprint 2 introduced additional functionality however, during testing, an error kept appearing when trying to display the training programs meaning we have to rework it. Training programs moved back to Backlog for the next sprint.

Sprint 3 (01/03/2026):

Start of Sprint 3:

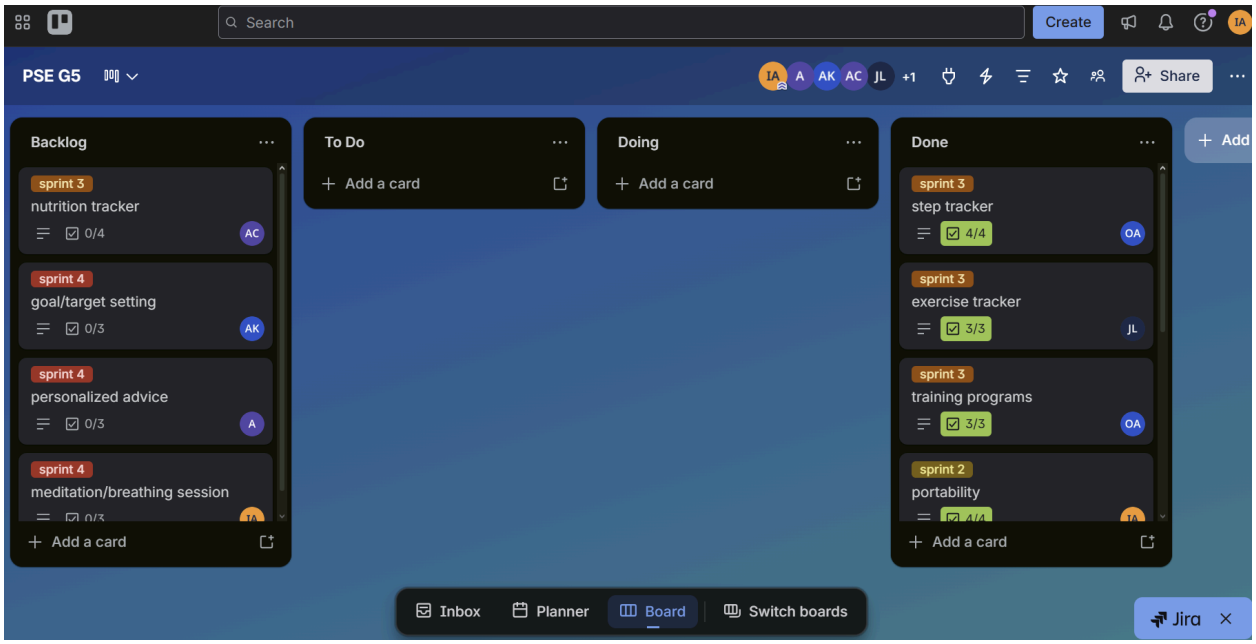


Mid sprint 3:



Delay in implementing nutrition tracker

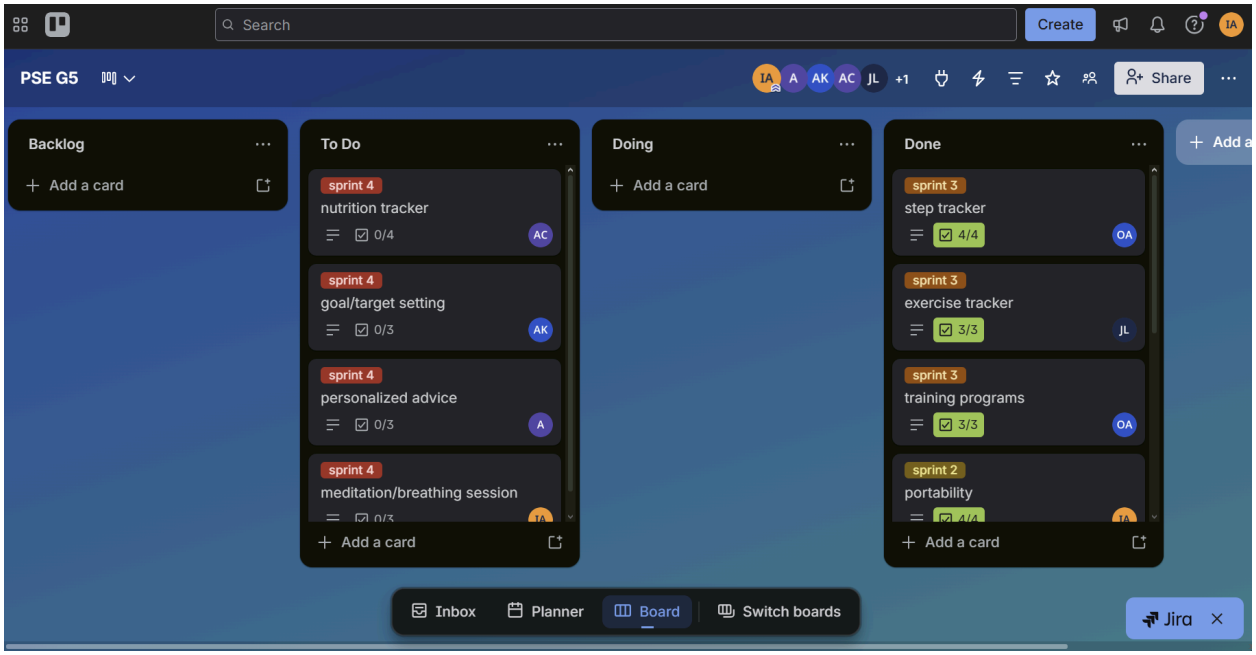
End of Sprint 3:



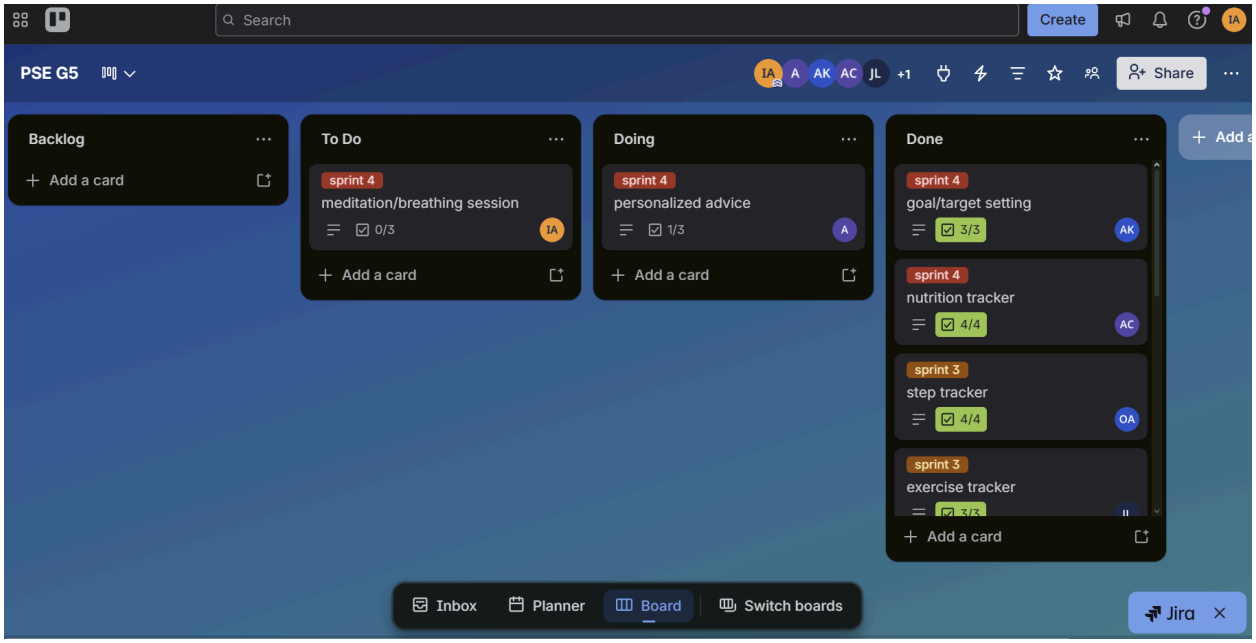
Sprint 3 faced a hiccup when there was a delay in implementing the nutrition tracker. During testing the nutrition tracker was also displaying wrong numbers which means it will have to be reworked and sent back to the Backlog for the next sprint.

Sprint 4 (08/03/2026):

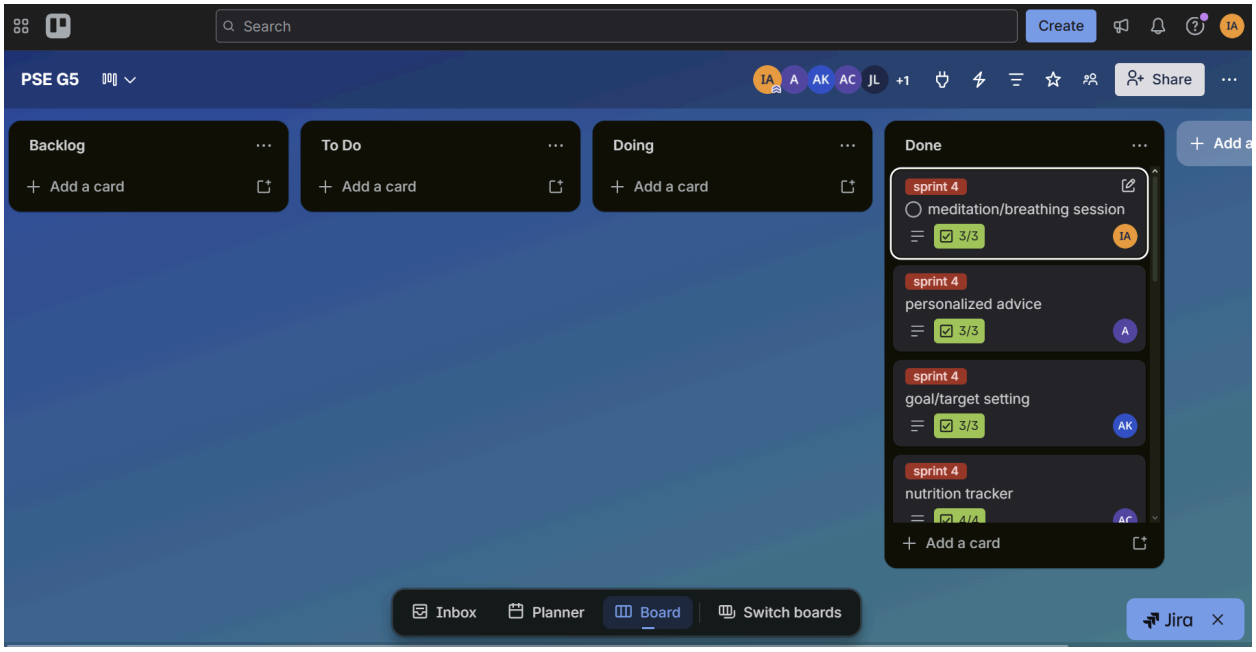
<u>Start of Sprint 4:</u>



Mid Sprint 4:



End of Sprint 4:



Sprint 4 focused on finishing the remaining features. Progress was steady, and the team ensured all user stories were delivered with quality. The backlog was cleared successfully on **10/03/2026**.
